Your Scalapay widget, CCD2 ready

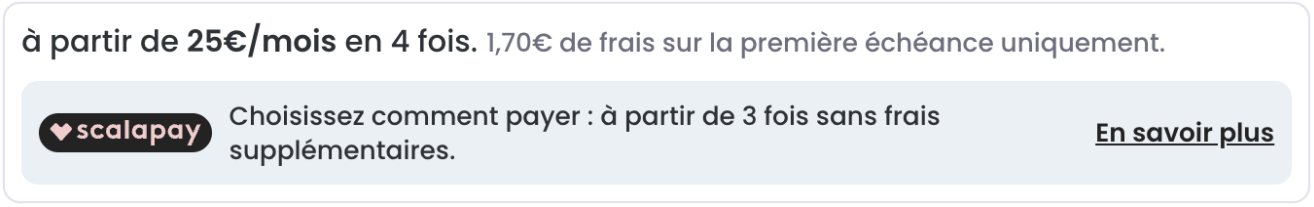

A two-minute check for websites that show Scalapay to customers in France. For merchants who offer Scalapay through Adyen.

From 20 November 2026, French consumer credit rules require every Scalapay widget shown to customers in France to display each offer with its cost. Scalapay widget 5.2 already does this for you.

You get widget 5.2 automatically when both are in place:

1. The Scalapay **V5 script** is on your pages.
2. The Adyen **merchant token 3LQDGJYPC** is set in every Scalapay widget.

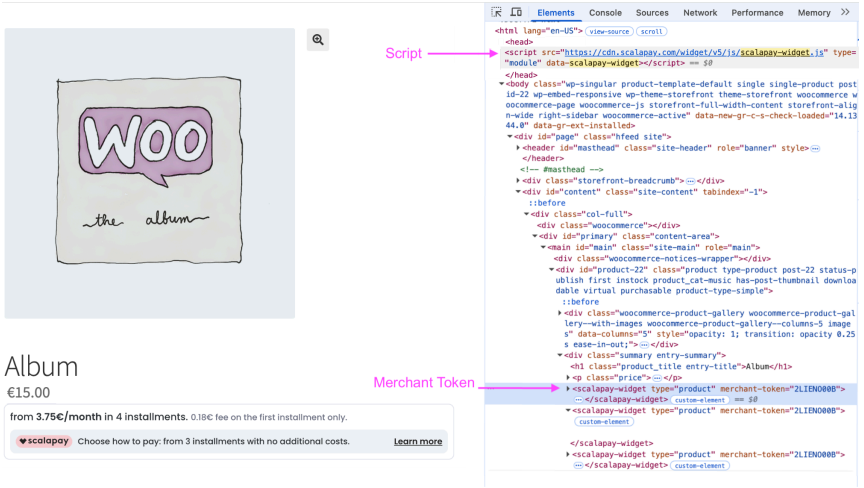

Step 1 · Check your website (1 minute)

1. Open one of your product pages in Chrome, Edge or Firefox.
2. Right-click on the page and choose **Inspect**.
3. Press **Ctrl+F** (**Cmd+F** on Mac) and search for `scalapay-widget`.

Look for two things:

- the script address contains `widget/v5` or `version=V5`;
- `merchant-token='3LQDGJYPC'` shows the Adyen token.

What you find	What to do
Both are there	You are done. Scalapay switches you to 5.2.
One of them is missing, or the token is different	Go to step 2.
No Scalapay widget on your website	Nothing to do.

Step 2 · Fix it

You use an e-Commerce plugin

WooCommerce, PrestaShop, Magento, Shopify and others

1. Update the Scalapay plugin to its latest version from your back office.
2. Paste the Adyen merchant token **3LQDGJYPC** in the Scalapay widget settings (see step 3).
3. Clear your cache and repeat step 1.

You have a Custom integration

The Scalapay code was added by your developers

Send this to your developer. It replaces any older Scalapay script and widget tag.

```
<script type="module"
src="https://cdn.scalapay.com/widget/v5/js/sca
lapay-widget.js"></script>
```

```
<scalapay-widget merchant-token='3LQDGJYPC'
type='product'
amount-selectors='["#price-container"]'
locale='fr'></scalapay-widget>
```

Step 3 · Use the Adyen merchant token

If you offer Scalapay through Adyen, every Scalapay widget on your website uses the same Adyen merchant token: **3LQDGJYPC**. You do not need a token of your own.

1. The token works in production only: do not set a test environment, in the plugin settings or in your code.
2. Reference for developers: https://developers.scalapay.com/docs/custom-integration-widget-installation
